Canimax offers an all-in-one solution for the treatment of intestinal worms and includes heartworm prevention. Canimax is a palatable tablet that can be easily administered every 6 weeks.

**WHAT IS CANIMAX?**

- Prevents Heartworm
- Treats Roundworm
- Treats Hookworm
- Treats Whipworm
- Treats Tapeworm (including hydatids)
- Liver-flavoured chewable tablet

**WHY CHOOSE CANIMAX?**

Broad spectrum specialist worming product

Canimax prevents heartworm and kills all intestinal worms (roundworm, hookworm, whipworm and tapeworm). One easy dose will protect your dog for 6 weeks from all worms that can be dangerous to your pet. Canimax is safe to use in puppies from 6 weeks of age, lactating and pregnant bitches, older dogs and collie dogs. This means peace of mind that your pet is being treated safely without the risk of complications.

Available in 3 sizes for dogs

- Small (0-5kg)
- Medium (5-10kg)
- Large (10-20kg)

Liver flavoured treat

Canimax is a tasty liver flavour chewable tablet. It converts worming into a treat. Tablets are quarter scored to allow for flexible dosing in multi-pet households.

**WHEN TO USE CANIMAX?**

Canimax can be used from 6 weeks of age and simply retreat every 6 weeks

- SMALL DOGS: 1 tablet for 5kg bw
- MEDIUM DOGS: 1 tablets for 10kg bw
- LARGE DOGS: 1 tablet for 20kg bw

**WHY DOES MY DOG NEED TO BE WORMED?**

Heartworm disease is a serious and potentially fatal condition. It can go undetected for many years and by the time it is diagnosed the worms may have caused significant damage to the heart and lungs.

The disease is carried from one infected dog to healthy dogs by mosquitoes and both indoor and outdoor dogs on mainland Australia are at risk.

Wherever you live, intestinal worms (roundworm, hookworm, whipworm and tapeworm) can cause illness in pets and potentially humans.

Dogs can pick up intestinal worms by transmission from the mother during pregnancy or following birth, by ingestion from contaminated food, from faeces, fleas, skin penetration, or from close contact with another animal.

These worms can cause diarrhoea, ill thrift, a pot-bellied appearance, failure to thrive, and a dry shaggy coat in dogs.

Some intestinal worms affecting dogs can potentially be transmitted to people. Children who play in soil contaminated with dog faeces are at risk of accidental ingestion of worm eggs.

**Treating your dog with Canimax is a simple solution to these problems.**
INDICATIONS
• Treatment of Roundworm (Toxascaris leonina, Toxocara canis), Hookworm (Ancylostoma caninum, Uncinaria stenocephala), Whipworm (Trichuris spp.) and Tapeworm (Dipylidium caninum, Taenia spp.) including hydatids (Echinococcus granulosus) in dogs. Prevention of heartworm (Dirofilaria immitis).

RECOMMENDED FOR USE IN
• All dogs from 6 weeks of age

DOSAGE & DIRECTIONS

You must consult a veterinarian before starting any heartworm prevention as your dog might require testing to establish whether or not heartworm is already present. If the pet is already being treated with an existing heartworm prevention product it is safe to switch to Canimax when the next dose is due.

• PUPPIES: Commence treatment at 6 weeks of age and retreat every 6 weeks.
• ADULTS: Retreatment is required every 6 weeks.
• Dogs should not be fed, or allowed to feed on, offal from any species.
